We are a global provider of fast, reliable, and easy-to-use test kits and instruments in the fields of bioanalytical testing for the food, feed, environmental, biopharma, and clinical industries.

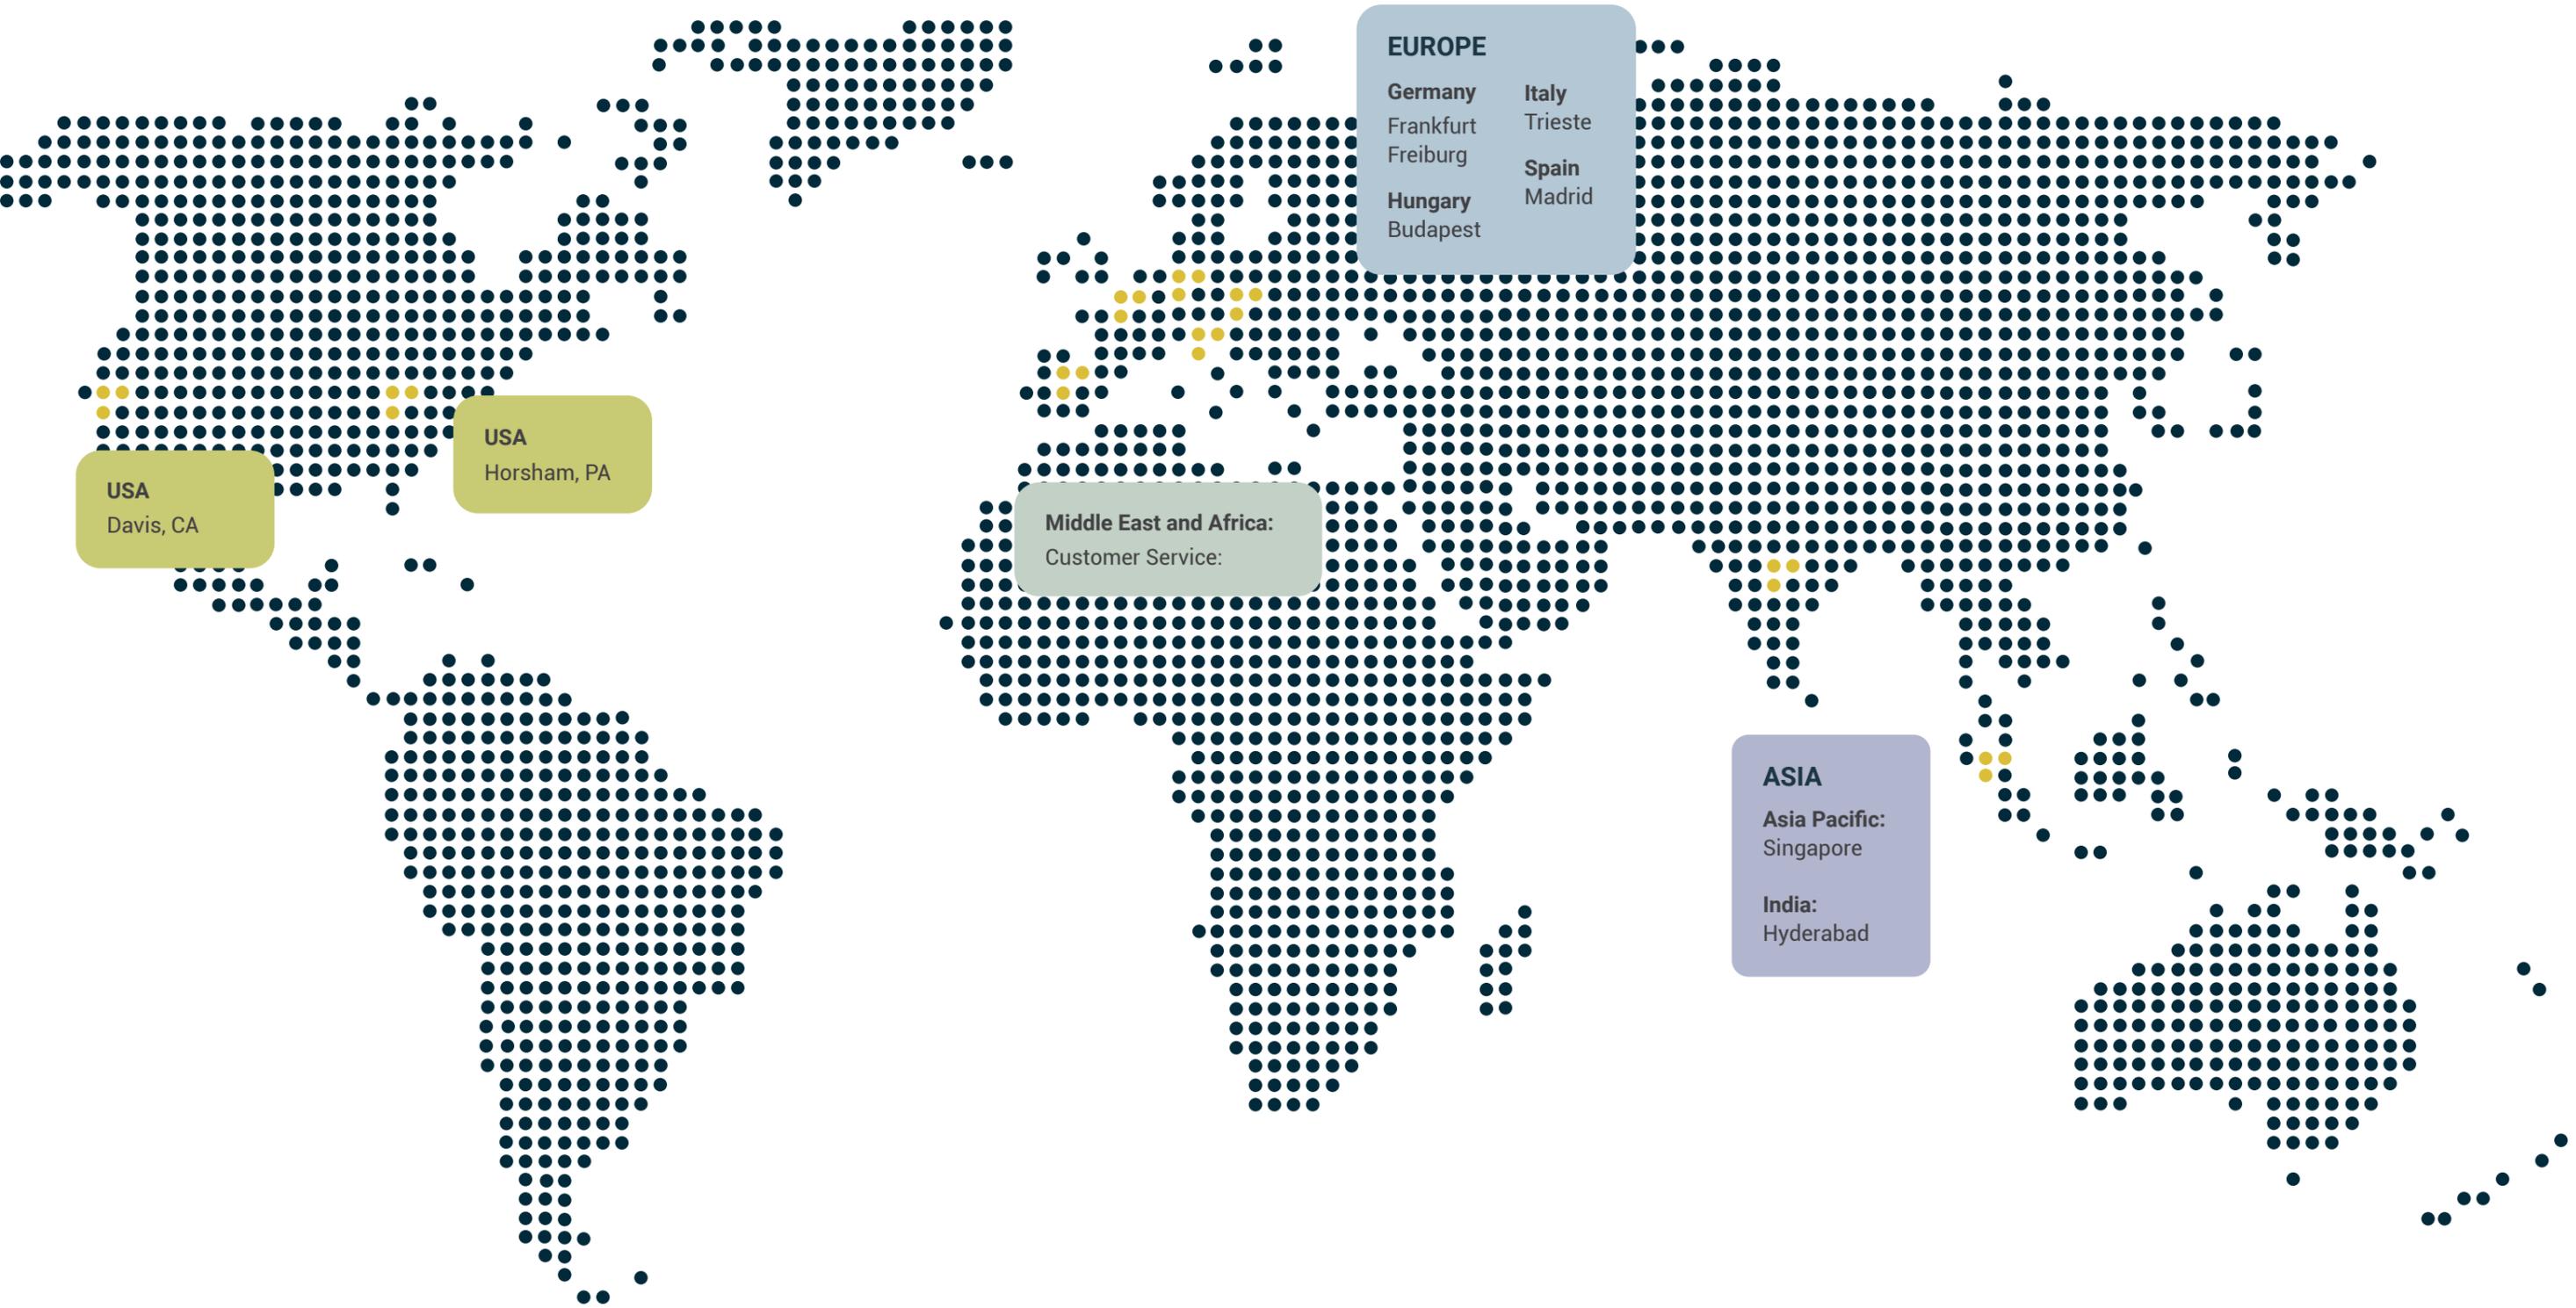

The in-house R&D teams have expertise in developing a wide range of innovative methods and applications to meet the testing needs of both research and industry.

Our experts are able to customize programs to serve specific needs with competitive pricing and high quality standards.

WHERE WE ARE

Our entities serve more than 100 countries worldwide.

ALLERGENS

Food allergens are proteins in food which can trigger allergic, sometimes even life-threatening, reactions in sensitised individuals. 90% of all food allergies are caused by the following eight common food categories: milk, eggs, peanuts, fish, shellfish, tree nuts, wheat and soy.

Managing food allergies usually means completely eliminating the allergenic proteins from one's diet, requiring strict traceability throughout the food production process, from raw materials to the final product. Beside EU Regulation No. 1169/2011, many other legislations worldwide require food manufacturers to label their products with all ingredients potentially capable of causing allergic reactions.

We provide the most comprehensive offering for food allergen rapid testing, including test kits, easy to use instruments, trainings and services, to suit your actual capabilities and needs.

VITAMIN ANALYSIS

Vitamins are essential nutrients for the growth, development, and maintenance of cells, tissues, and organs. Vitamins are classified as either water-soluble or fat-soluble. For humans, there are 13 vitamins: 4 fat-soluble (A, D, E, and K) and 9 water-soluble (8 B vitamins and vitamin C). These nutrients are typically obtained through the consumption of food or dietary supplements, which are subject to vitamin testing in order to meet specific labeling requirements.

We offer ELISA kits and immunoaffinity columns (IAC) for the detection and purification of the following vitamins: Biotin (Vitamin H or Vitamin B7), Folic acid and Vitamin B12.

FOODBORNE VIRUSES

Due to a large number of viral food-related outbreaks, the detection of viruses in food is an important issue in food safety. Oftentimes even low concentrations of a virus can lead to severe health consequences, such as gastrointestinal or liver infections.

VIRSeek Solution: Viral Foodborne Pathogen Detection

The VIRSeek Solution offers an all-inclusive, ISO-15216 compliant workflow from the RNA extraction to the specific detection of norovirus genogroup I, norovirus genogroup II and hepatitis A virus. In addition, the process control murine norovirus (MNV) ensures the monitoring of the RNA isolation procedure.

Each of the VIRSeek Solution kits can be used individually or as part of the comprehensive workflow validated for Agilent AriaMx™ and Bio-Rad CFX96™ (Standard and Deep Well).

MYCOTOXINS

Mycotoxins are toxic secondary metabolites produced by moulds, which grow on a variety of different crops and foodstuffs such as cereals, nuts, spices, dried fruits, apples and coffee beans. Mycotoxins pose a health threat to humans, pets and livestock, potentially causing a number of adverse health effects. It's not only plant-based foods that are at risk; milk may also have a presence of aflatoxin M1, the concentration of which depends on the aflatoxin ingested by the dairy cows through their foodstuffs.

We provide comprehensive solutions for mycotoxin screening, from on-site early detection by rapid tests to a variety of cost-efficient, high-throughput ELISA kits and analyzers, and even clean-up devices for laboratories performing confirmational verifications through instrumental analysis. Our on-field trainings and R&D services to customize, verify and validate our customers' applications complete the product offering.

GENETICALLY MODIFIED ORGANISMS (GMO)

Cultivation of genetically modified (GM) crops has increased significantly around the globe over the years. This increase in production has been combined with a complex and ever evolving global regulatory approval process for GM products, therefore requiring the testing of food and agricultural products for genetically modified content in order to facilitate international trade.

GMO analysis can be performed in the field or in a testing laboratory and determination of the appropriate test method is dependent on the nature of the sample, the required level of sensitivity of the assay, and the intended market for the product.

We offer a broad range of GMO testing products that cover both the rapid onsite / field testing as well as comprehensive molecular analysis.

GMO Testing with Real-time PCR

Our GMO testing portfolio is adapted to the volatile and current market situation and the global GMO planting and approval situation of GMOs. Real-time PCR kits for GMO testing are validated on various cyclers and are available for screening, identification and quantification.

Real-Time PCR Kits:

- **GMOScreen**: modular toolbox of simplex and multiplex assays for GMO screening
- **GMOIdent**: identification or exclusion of GMOs
- **GMOQuant**: quantitative to quantitate the GMO content

ELISA Kits and Lateral Flow Devices for GMO Detection

The ELISA test kits provide an accurate and reliable solution to verify the presence or the absence of inserted trait in individual leaf, seed or bulk grain.

Our lateral flow devices enable a rapid on-site GMO detection in cotton, corn, soybean and mustard / canola.

RapidScan ST5-W LFD Reader for GMO Testing

We offer a quick and easy-to-use protein-based testing method to identify genetically-modified raw ingredients like corn, soybean and canola before they are processed into a final product. The reader provides an easy on-site quantitative interpretation of the results in only 10 min.

NUCLEIC ACID ISOLATION

Food, feed and seed laboratories are often faced with a number of challenges during the isolation of DNA. The high variability of samples types as well as inhibitory substance and low DNA yield can have detrimental impacts on the subsequent analytical methods, such as PCR testing. High-quality DNA is the prerequisite for the success of these methods, therefore it is crucial to select the right DNA method optimised for your sample type. Our kit portfolio offers DNA methods for a wide range of sample types.

Automated DNA Isolation With iMAGo Food

Meeting the needs of a high-throughput laboratory, iMAGo Food offers an automated, magnetic-bead based technology to efficiently isolate genomic DNA from a high variety of

Key Benefits

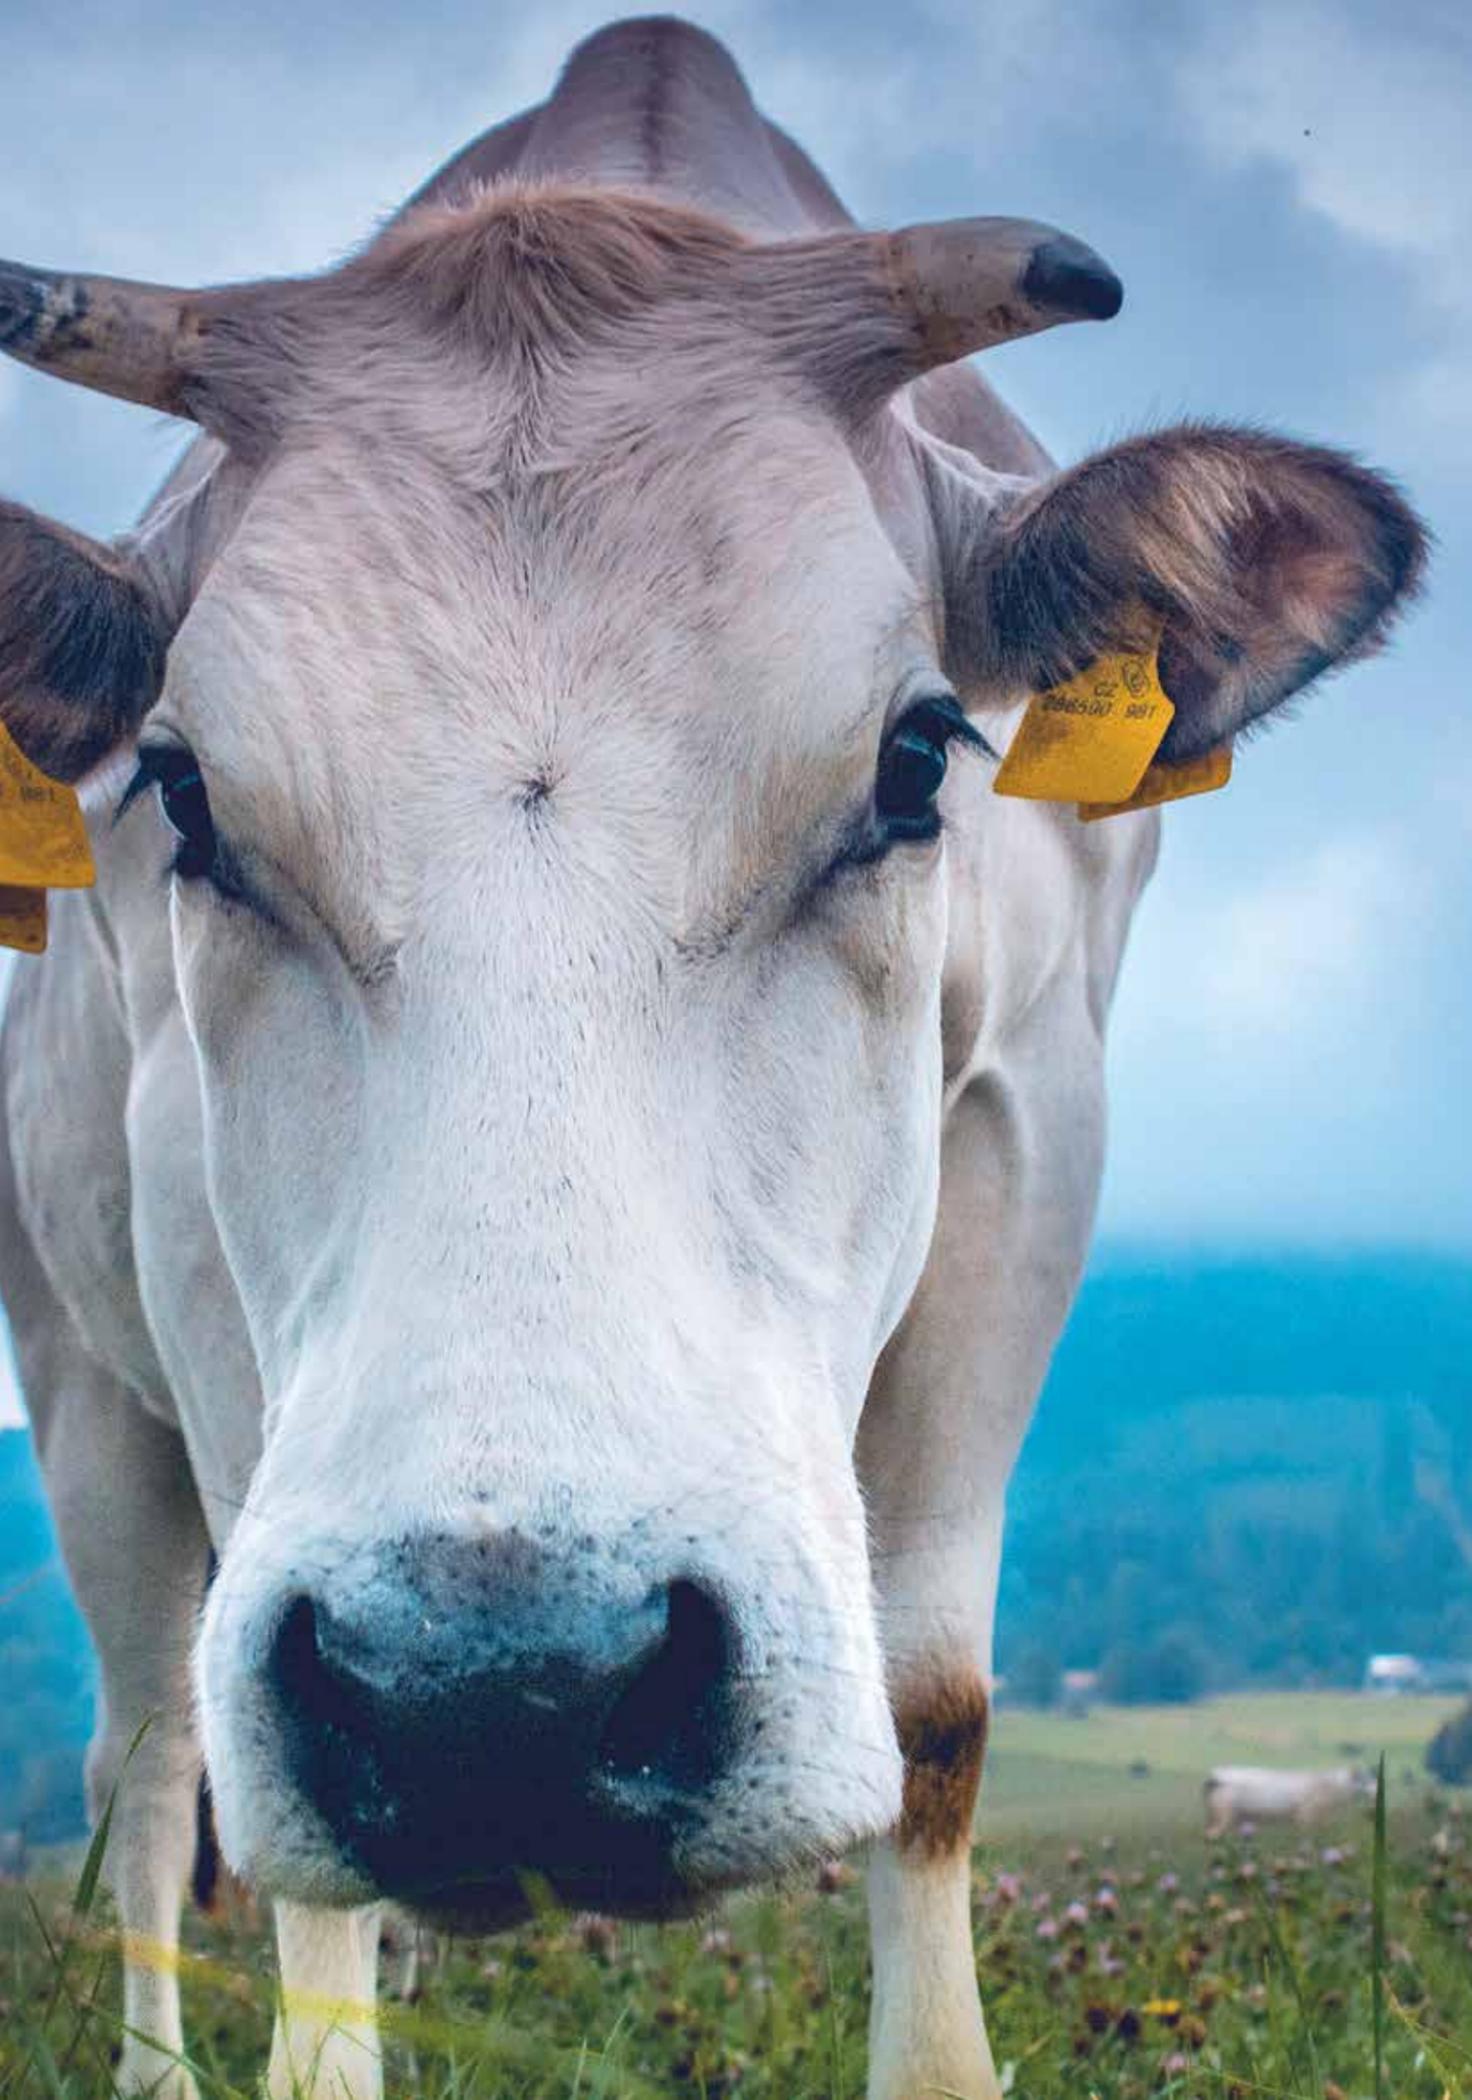

- Recovery up to 180 µg of DNA when using raw matrices such as corn kernels (DNA yield strongly depends on matrix type and grinding performance)
- For use on open platforms such as KingFisher Flex System and Allsheng Auto-Pure 96
- Highest matrix variability being validated with one workflow
- Fully validated workflow with subsequent GMO Real-Time PCR systems
- Based on solvent-free chemistry

VETERINARY DRUG RESIDUES AND ADDITIVES

Veterinary drugs are usually administered within animal husbandry to cure and to prevent diseases, to increase weight gain and to tranquilize animals during transportation. These drugs consist of a complex group of hundreds of substances belonging to different chemical classes and therapeutic areas i.e., antibiotics, antiparasitics, nonsteroidal anti-inflammatory drugs, growth promoters such as steroid hormones and betaagonists, and many others.

The widespread use of veterinary drugs in livestock is of great concern as their presence in edible products could induce severe consequences on human health: i.e., hepato- and nefro-toxicity, side effects, allergic reactions, sterility, cancer, and last but not the least, drug contaminated food can favor anti-microbial resistance.

ELISA Kits to Detect Veterinary Drug Residues and Feed Additives

We provide broad support for the needs of the meat, dairy, aquaculture, animal husbandry, veterinary, and other industries. Products include ELISA for quantitative analysis and lateral flow tests for rapid analysis of substances in matrices such as meat, egg, milk, honey, fish, crustaceans, molluscs, and animal feed.

Analytes include:

BIOGENIC AMINE

Histamine is a biogenic amine, which is formed by enzymatical decarboxylation from the amino acid histidine. It can enter the human body via nutrition and can thus cause pseudo-allergic food intolerances.

Food intolerances, which are caused by increased histamine concentrations, are clinically characterized by rash, diarrhoea, vomiting, nausea, itching, headache and asthma. The extent of the reaction is dependent on the ingested amount of histamine.

Separated from histamine intolerances toxic reactions exist, which are caused by very high histamine concentrations. Toxic histamine concentrations, which can cause the so-called scombroid reaction, appear after bacterial degradation of protein-rich food, especially fish.

Histamine is found above all in cheese, fish, spinach, smoked products and red wine. Our kits provide a quick, economical and sensitive method to detect histamine in wine, fish or cheese.

ANIMAL SPECIES

Animal species identification in food and feed products has grown in importance due to public health, economic and legal concerns. Even religious and ethical criteria can be at risk in the case of food adulteration. To verify the authenticity of products, food testing laboratories need reliable methods, which can answer these questions.

The application of specific methods can determine if lower-priced substitutes replace premium products such as chicken instead of turkey or cow milk instead of goat milk. Confidence that vegetarian or vegan food contains no trace of animal products is essential to brand integrity. We also offer DNA isolation and purification solutions for a wide range of matrices, including highly processed matrices such as pure gelatine"

DNAnimal Kits

The DNAnimal product line offers a broad spectrum of sensitive real-time PCR kits for the most domestic animal species as well as specific applications like halal testing.

Most DNAnimal kits detect the species or taxonomic group in question with a sensitivity of 0.01%. Some specific kits (e.g. the DNAnimal Ident Pig HS) detecting mitochondrial targets are even more sensitive.

DNAnimal Screen

- Kits cover different taxonomic groups
- Application for various food and feed relevant testing strategies, i.e. to test vegan or vegetarian food

DNAnimal Ident

- For identifying or excluding individual animal species

Key Benefits

- Multiplex kits targeting in total 12 animal species to increase efficiency in the laboratory
- Kits are validated on a number of different thermocyclers
- Contain an IPC (internal positive control) to exclude false-negative results
- Have undergone extensive specificity and sensitivity validation
- Produce robust and reliable results
- DNA extraction kits available for different matrices

ENVIRONMENT AND WATER

Water is critical for life itself, making it arguably the most valuable resource on the planet. As a result, water is the object of numerous environmental laws and regulations throughout the world. These regulations address not only drinking water but the entire water cycle including surface and ground water, recreational, process and waste water.

Due to the diversity of water testing applications, flexibility is important and can provide distinct advantages to users in meeting specific testing objectives. Traditional analytical laboratory testing can often be costly and time consuming. Our commercially available test kits allow for accurate, on-site testing, providing near real time answers for critical decision-making, often at a lower cost than traditional methods.

ABRAXIS® Environment and Water Kits

We provide innovative, near real time, field and lab based testing solutions for water and environmental samples.

Algal Toxins

Our algal toxin products are available in multiple formats and applications to meet the diverse testing objectives of our customers. Test kits include quantitative ELISA plate kits as well as semi-quantitative/qualitative lateral flow kits. We hold the exclusive world-wide license for the ADDA-specific microcystins antibody, making us the sole commercial manufacturer of Microcystins ADDA test kits as specified in EPA Method 546. We also offer testing solutions for Cylindrospermopsin, Saxitoxins, Anatoxin-a, Brevetoxin, Anabaenopeptins, Okadaic acid, Domoic acid and BMAA in various sample matrices.

Pesticides (including Glyphosate):

We offer the only commercially available AOAC approved Glyphosate ELISA kit for Durum Wheat, Whole Oats, Groats, Yellow Peas and Red Lentils. We also offer quantitative and qualitative detection of glyphosate using ELISA and lateral flow dipstick in other matrices including water, honey, coffee, grains, legumes and oats. Other pesticide kits include 2,4-D, Atrazine, DDE/DDT, Diuron, Fluridone, Imidacloprid, Metolachlor, Organophosphates/Carbamates, Pyrethroids and Trifluralin.

Industrial Chemicals / Hydrocarbons

One of our core strengths is developing sensitive and specific antibodies against small molecules. We provide test kits for a variety of environmental contaminants.

Markers for Bioactivity

Certain compounds found in consumer products can be used as markers of human bioactivity. We offer quantitative assays to measure these biomarkers in environmental samples.

Equipment

We offer a variety of readers and associated equipment that are compatible with our rapid test kits including ELISA plate, tube and test strip readers. Our equipment offering supports both field and lab-based testing as well as applications ranging from qualitative to quantitative to meet your specific testing needs.

Key Benefits

- 20+ years of collaboration with key government agencies to meet and exceed the needs of researchers and industry
- Unmatched expertise in rapid water and environmental testing
- Multiple technologies, formats and applications to meet customer-specific objectives

VET ALLERGY DIAGNOSTIC SOLUTION

Have full control of dog, cat and horse allergy diagnostic tests in your own laboratory.

The Canine INgezim PLEX Environmental and Food Sensitization kits allow to detect sensitizations to the most common environmental and food allergens affecting dogs. Together with the GSD allergy ELISA tests, they form the most complete solution for diagnosing veterinary allergies.

ALL IN ONE: Complete solution (kits + automation) to carry out the diagnosis in your own laboratory, without having to send samples or depend on third-party companies.

ACCURACY: In microarrays assays, sensitivity is increased due to the miniaturization of the assay. Similarly, double testing of each allergen and the use of CCD* blockers provide greater diagnostic precision.

EXPERIENCE: We combine the best expertise of two GSD companies performing research on allergy diagnostics for more than 10 years, to offer you complete diagnostics solutions including consumables, automation and technical support

COST & TIME REDUCTION: Multiplexing reduces labor and effective work time, which further reduces the already affordable price per test. In addition, it requires a low sample consumption (100 µL of serum), facilitating handling with samples from companion animals.

CUSTOMIZATION: Microarray test panels can be customized based on the geographic area or specific design needs of each laboratory.

*CCD = Cross-reactive Carbohydrate Determinants, present in glycoproteins of some Plant and insect allergens. While CCDs are found in many allergens, they do not trigger clinical symptoms.
